1. Overview

When you are in a meeting or a concert where you cannot talk, type in your message and Quietalk speaks it for you: Your caller hears what you have typed in. If you have a pre-recorded message, click on it to play it during your call. Or click on a template to play that. Choose from multiple voices.

You can configure the application to suit your needs using its simplified user interface. Quietalk is also useful for those who have a difficulty in speaking.
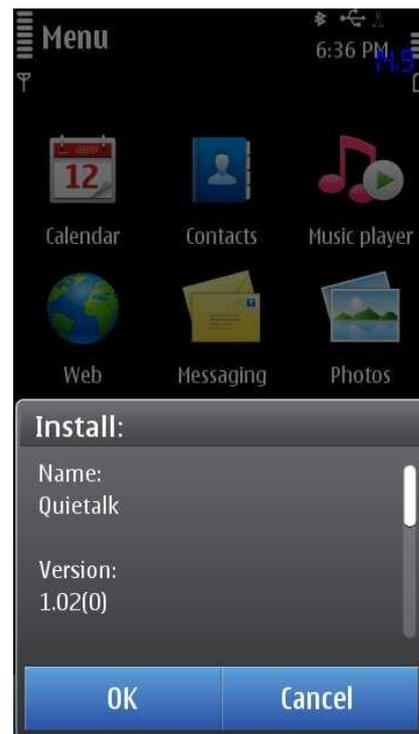

1. Version History
    a. 1.3
        i. Mute option added. When inside Quietalk, the microphone mutes automatically, preventing surrounding sound from being heard
        ii. Option for downloading speech package
        iii. Feedback/Suggestion option added in the main menu
    b. 1.2
        i. Typetalk can now translate the text message to the speech language of your choice.
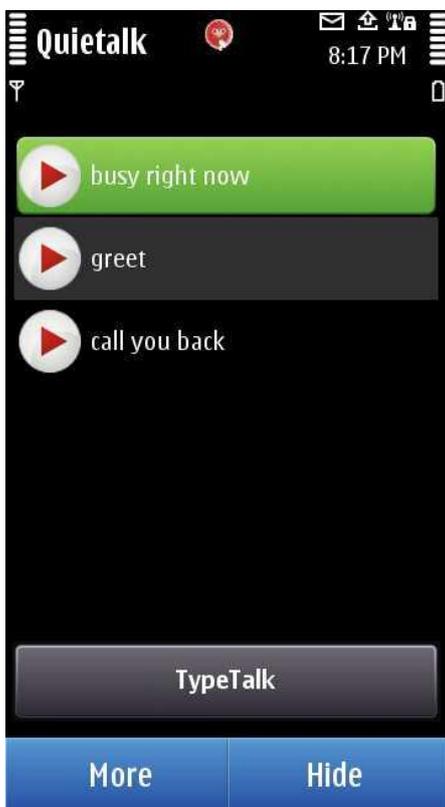

2. Installation
    a. Launch the Quietalk installer.
    b. Choose the drive you want to install it on
